

## LAMINATES FOR INSULATION

CLP has been recognized worldwide for its expertise in laminates for flexible packaging, including pouches and retortable lidding. The skills that make CLP a leader in packaging also yield outstanding laminates for use in high-quality insulation materials.

CLP laminates are being used by several leading manufacturers of:

- Home thermal insulation
- Insulation for trucks and trailers
- Insulation for industrial and agricultural structures.

Every type of insulation has specific requirements, and CLP can create a laminate to meet each client's specific needs. On a basic level, insulation laminates typically include a layer of polyethylene (PE) and a layer of aluminum foil. Special features include:

- Anti-corrosion coating.
- Added reflective properties.
- Colored coatings.

State-of-the-art lamination and printing lines allow CLP to create and coat laminates to exacting specifications – ideal for insulation companies seeking a competitive edge or serving a specialized market. CLP's high-efficiency production results in lower costs compared to buying pre-coated foils.
